MARKET REPORT

Mexico

Market Update

AUGUST 2020

Mexican Tourist Outlook 2020

The following analysis will examine the current state of the Mexican economy, the tourism sector, and the evolution of variables that have a tangible influence on the hotel industry in Mexico.

Size of the Mexican Hotel Industry

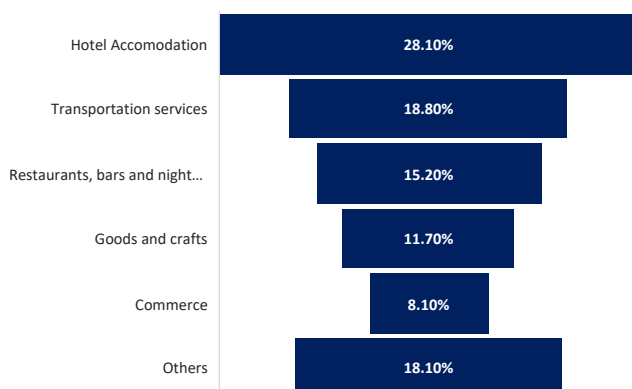

There should be no doubt about the economic importance of tourism for Mexico. In 2019, 44.7 million foreign tourists visited Mexico and the total income for this concept amounted to 24.6 billion dollars. In that same year, Mexico was ranked number 7 worldwide for the number of international tourists (OMT). The sector directly accounts for an 8.7% share of the Mexican GDP and provides employment for 2.3 million people (2018). Tourism provides 6% of the total amount of work in the economy and is in first place as a youth-employer sector, as well as in second place for women-employer sector.

Tourism's share in national GDP 2011-2018

Source: INEGI, 2018

Composition of tourism's GDP in Mexico

Source: INEGI, 2018

With more than 11,100 km of coastline and landscape that varies from desert to mountains and rainforests, as well as an abundant cultural heritage that includes well-preserved ancient indigenous cities, Mexico has a privileged geographical location that appeals to its North American neighbors.

Number of Rooms

Country	Number of Rooms
Mexico	808,139
Brazil	541,314
Colombia	307,458
Perú	304,640
Argentina	118,858
Ecuador	74,173
Costa Rica	57,233
Chile	45,112

Source: DATATUR, MINCETUR, REPORTUR, SER NATUR, EMBRATUR

Mexico occupies the largest share in number of rooms, when compared to Central and South American countries. It is followed by Brazil with 541,341 rooms and Colombia with 307,458.

In 2019 Mexico was located in second place for largest growth in supply when compared to the North American region.

Global Supply	Dec 2019 vs 2018
Canada	1.50%
United States	2.00%
Mexico	2.40%
Caribbean	2.80%
Central America	1.10%
South America	1.30%
Europe	1.40%
Middle East	5.90%

Mexico's Top 10 Markets for New Rooms Before Covid

Cancun	4,750
Riviera Maya	2,458
CDMX	1,814
Monterrey	1,645
Los Cabos	840
Puerto Vallarta	792
Guadalajara	612
Mexicalli	276
Cd. Juarez	140
Chihuahua	126

Source: STR, February 2020

Cancun is the main and fastest-growing market for new rooms (35%), followed by Riviera Maya (18%) and Mexico City (14%).

Mexico has several destinations that highlight its history and Pueblos Magicos (Magic Towns) that have not been marketed to their full potential. There is an opportunity to develop boutique hotels in places that are neither cities, beaches nor industrial areas, but colonial cities. Though these are not very large hotels, they have proven to be a very profitable business in European destinations.

Though the country is not among the top countries in tourism-income generation, the country does receive a significant number of visitors. Mexico is in the 37th position worldwide in terms of average spending per tourist with \$ 496 per capita in 2019. A challenge presented for the sector is to get tourists to spend more money in the country.

During 2019 Mexico experienced a pronounced decrease in RevPAR as well as a decrease in ADR. A fall in RevPAR is both occupancy-driven and ADR-driven. Room Supply increased 3.10% while Room Demand fell -0.5%. The following chart illustrates the main trends during the year 2019.

Mexico 2019 Year End Growth

Room Supply	3.10%
Room Demand	-0.50%
Occupancy	-2.60%
ADR	-2.50%
RevPAR	-5.00%

Source: STR, February 2020

Key Performance Indicators

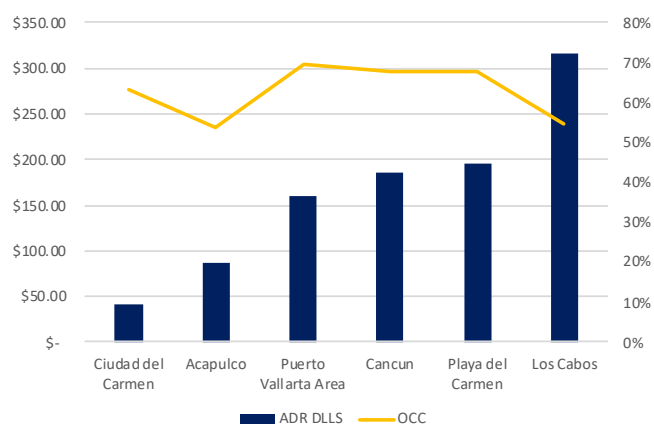

Cabo San Lucas Aerial View, Pacific Side

Resort Destinations

Los Cabos has the highest ADR of the beach destinations in Mexico, \$315. Playa del Carmen and Cancun follow, with ADRs of \$195.70 and \$185.70. Occupation wise, the Puerto Vallarta area, Cancun and Playa del Carmen present the most elevated occupancy rates with 69.6%, 67.9%, and 67.8% respectively.

COVID-19 and its impact on the Mexican Hotel Industry

Since the beginning of the year, the global economic and financial environment has become significantly more adverse due to the challenges associated with the COVID-19 pandemic. Such global economic crisis has been unprecedented; unlike previous crisis in the past decades, this economic scenario was originated by a health problem, not within the financial or economic sphere. COVID-19 has had an abrupt impact on every sector of the global economy.

Worldwide measures of confinement and social distancing were implemented in order to contain the spread of the virus. This has had and will continue to have significant repercussions on financial markets, productive activity, and the inflationary process in the nation.

According to United Nations World Tourism Organization (UNWTO) the tourist flow could reduce from 58% up to 78% during 2020. No crisis that originated from a climatic, sanitary, nor financial or economic circumstance has had an analogous repercussion in the industry.

While, in other parts of the world, hotels had the option to close, tourism was declared a non-essential activity in Mexico. Therefore, hotel occupancy was restricted to 25%, directed only for guests performing any type of activity considered “essential”. It is estimated that the reopening of

hotels could take place during July or September.

A large part of the recovery will come with the resumption of activities in the great metropolises, beginning with Mexico City.

Until the date of preparation of this report, it has been considered that hotels within the city will be able to resume activities on July 1st under an occupation rate of 30% while keeping common areas closed to the public.

Annual Variation of International Arrivals in Cancun, Los Cabos and Puerto Vallarta Airport

Source: GAP, ASUR

Recovery for the Mexican Hotel Industry will be slow. When you combine the cancellation of events and overall travel with lower income related to job losses, it is a perfect storm for the sector. Though this is not the first time that the sector has faced a global crisis, we expect the recovery will take longer than after the 2009 crisis. We believe that the sector will not return to 2019 levels until the end of 2022.

Changes in currency rates affect the spending pattern of consumers in a destination. Mexico's travel and tourism performance relies largely on international arrivals from countries using the US dollar. Therefore, the behavior of Dollar-Mexican peso parity could result in a relevant competitiveness gain for the region.

On one hand, outbound travel will become more economically accessible for Mexico's primary visitor markets such as the United States and Canada. Marketing campaigns and concentration in this audience is a way reach new potential travelers. On the other hand, inbound travel to countries where the US dollar prevails will become relatively more expensive for locals. Furthermore, the risk of traveling by plane for long periods of time could work as an incentive for traveling in national territory.

Industries will have to take precautionary measures and change strategies for the possible emergence of another pandemic. Different health protocols from the WHO, brands and hotel associations will begin to emerge. Some hotels have opted to create a proper Sanitation Department with strict rules and protocols to keep guests safe. Hotel corporations are implementing technologies in their regular operation in order to limit face-to-face interactions while keeping high levels of service.

Guests will likely be able to make the check-in and check-out processes from their own devices and in some cases, they will even be able to make restaurant reservations,

request airport transfers, order room service, among others. Digital menus and sustainable single-use packaging will be the new normal at restaurants and bars inside hotels, who will be required to have a socially distant set up and reduce their capacity levels. Public common areas will summon special cleaning procedures and sanitization in high-touch spots.

In some resorts, rooms will be implemented with new technologies to standardize the cleaning procedures. Due to the new protocols, hotels will have a higher cost than the average working capital. Board members and management teams will have to find a balance point that defines under what conditions a hotel can remain open or remain closed and establish a protocol for each of these situations.

Without a doubt, the distribution of the vaccine will be the most effective antidote to encourage tourism in Mexico and in the world. In the months before the vaccine is distributed, the impulse will come from the lifting of travel restrictions and the decrease in the virus transmission levels. Much of the recovery of the tourism industry will come from the reactivation of the aeronautical sector and the government's return policies.

It is likely that individual demand will recover sooner than business or group demand. The younger, high-income generations, more than previous generations, are making travel a priority. Considering the COVID-19 pandemic, people will prefer destinations that are not mass marketed.

On the short term, managers will have the challenge to offer a competitive rate without compromising the hotels' ability to cover its operational expenses.

We can expect that travelers' priorities include price and sanitary measures. In that sense, road tourism will be the first to recoup since travelers will feel more comfortable and safe travelling in their own vehicles. Therefore, it will be a challenge for the government to take prudent measures that guarantee the safety of all travelers while being on the road.

Hotels of economic, medium and upper-medium category that tend to be cheaper, have the potential to be the first to emerge from the economic impact of the pandemic since they have the ability to capture individual travelers and business travelers whose corporations are willing to move their employees for the realization of essential jobs.

The luxury category, due to its competitive advantages and, in some cases, the particular location of the resorts contributes to create a sense of loyalty in their clients. However, the luxury category will have to be very creative in attracting guests who are now facing an impending recession and will be price sensitive.

Large hotel corporations with an elevated number of rooms will present competitive challenges and opportunities. On the one hand, a difficult task for management teams will be the reduction of corporate expenses and working capital. On the other hand, by having larger spaces, resorts find it easier to design a common area for the exclusive use of guests while respecting social distancing measures.

On the **corporate side of the demand**, the market will recover gradually as the activities of each economic sector are resumed. We believe that there is going to be a relocation of manufacturing plants from Asia to Mexico after the COVID-19 pandemic has passed. This process is called reshoring¹ and nearshoring². This will lead to strong demand for industrial warehouses in Mexico. Stronger demand from the business sector and an increase in activity in the logistics arena will lead to greater hotel demand in industrial and urban areas.

On the contrary, pandemic forced companies to embrace a work-from-home scheme rapidly. Because of technology, this solution might be permanent. Corporations plan to let a significant part of their employees work from home after

lockdown, implying a decrease in face-to-face meetings and an increase of online meetings. A contracting economy and the reduction of companies' gross profit will make it more difficult for the corporate segment to reactivate. Likewise, economic agents in each sector will exercise caution when exposing their workers to contracting the virus.

It is hard to tell when the REVPAR and Occupancy are going back to its previous levels. Therefore, in order for participants of the hotel industry to keep operating under atypical conditions, it will be of vital importance to maintain discipline in the management of resources. Industry agents must have an active behavior in face of a sanitary crisis and find internal mechanisms that comply with the international hygiene standards and, as a result, recover the consumer's trust. Flexible structures, available for rapid changes, will provide agents with advantages over passive competitors. Training of the staff and housekeeping personnel will be key to provide guests a sense of confidence and tranquility. Considering present and future market conditions, more than ever, corporations should increase cash inflow and delay cash outflows, as well as plan strategic decisions that guarantee liquidity to deal with potential opportunities.

The main concern in the Mexican Hotel Industry with the current COVID-19 pandemic is the lack of fiscal incentives to the sector. Restarting and starting costs, especially when it comes to construction, are very high considering that hotels are not highly profitable during the first years of operation. It would be ideal for hotels to receive fiscal incentives during their first years of opening or restarting operations. Another concern is clarity in the country for doing business. However, this concern is nothing new. Obtaining permits and licenses are among the most complicated processes for businesses, and investors often perceive these bureaucratic processes as an obstacle for investment.

States have presented their own measures to reactivate the overall economy. Sadly, there is no concrete federal countercyclical policies that incentivize a faster recovery aiming to the tourism industry.

1 *Reshoring: the process of returning the production and manufacturing of goods back to the company's original country.*

2 *Nearshoring: the process of returning the production and manufacturing of goods back to a location that is less expensive and geographically closer.*

Economic Forecast for Mexico

The economy is set to suffer a great recession this year.

Factors affecting the economy are:

- Prolonged COVID-19 confinement;
- Mexican exports will definitely fall due to the drop-in world demand and in particular that of the United States (approximately 80% of Mexican exports in 2019 ended in the United States). Mexico is one of the world’s most trade dependent countries in the world and is highly dependent on exports to the U.S., which account for almost a quarter of the country’s GDP. The result is that the Mexican economy is strongly linked to the U.S. business cycle.
- An increase in the fiscal deficit is expected in 2020 as a result of less economic activity and therefore a possible increase in public debt.
- Lack of investor confidence with the current administration (Among the most controversial decisions of the current administration was the suspension of a long-awaited and under construction New International Airport in Texcoco -NAICM).
- Increase in risk country increase related to developing economies.

	GDP 2020	GDP 2021
Barclays	-6.5%	1.8%
Banorte	-9.8%	1.8%
Credit Suisse	-9.6%	3.0%
JP Morgan	-8.6%	2.5%
Citibanamex	-9.0%	4.8%
BBVA	-7.0%	2.9%
Santander	-8.0%	4.5%
UBS	-7.6%	4.5%
BANXICO	-9.0%	2.8%
AVERAGE	-8.3%	3.2%

*Forecasts to date 06/07/2020. Amounts in trillion dollars.

The economy is expected to contract -8.3% in 2020 and grow 3.2% in 2021 and 2.05% in 2022.

A V-shaped recession is expected for the Mexican economy. The economy will suffer a pronounced decline followed by a recovery due to an improvement of macroeconomic conditions.

Forecast for GDP Growth

Source: Horwath HTL Mexico. Amounts in trillion dollars.

Ongoing economic and social concerns in Mexico include: a highly ‘monopolized’ economy (telecommunications, oil, electricity and media monopolies), low real wages, underemployment for a large segment of the population, inequitable income distribution, violence related to the drug war (specifically at Border Cities with the US) and few advancement opportunities for the largely Amerindian population in the impoverished southern states (Chiapas, Guerrero, Oaxaca, Tabasco & Veracruz).

“With a population of almost 130 million, a rich cultural history and diversity, and abundant natural resources, Mexico has the 11th largest economy in the world. The country has strong macroeconomic institutions and it is open to trade and private investment.

The authorities have implemented stable and sustainable monetary and fiscal policies, which have made the Mexican peso the most highly traded emerging market currency. Currently, it is the world’s 15th largest exporter due to the strengthening of its productive capacities, diversifying away from raw materials such as oil, and deepening its production complexity on manufactured products that are integrated into regional and global value chains.

However, despite all this progress, over the last three decades Mexico has underperformed in terms of growth, inclusion and poverty reduction compared to similar countries. Its economic growth averaged just above 2 percent a year between 1980 and 2018, limiting progress in

convergence relative to high income economies. On a per capita basis, average growth was close to just 1.0 percent.

The country's per capita GDP today stands at 34.0 percent of U.S. per capita GDP, compared with 49.0 percent in 1980. In this context, progress towards poverty reduction has been moderate. The total share of the population living below the monetary poverty line in 2018 was 48.8 percent, close to the level observed in 2008. The median per capita income (MePCI) has recently recovered slightly after several years of decline.

After a decline between 2010 and 2014, the annualized growth rate of MePCI in Mexico was 1.8 percent between 2016 and 2018, still well below the average for the LAC region.

Low growth rates and significant inequalities continued to raise the question of how Mexico can grow more rapidly and become more inclusive? These are the central issues covered in the recent Mexico Systematic Country Diagnostic (SCD).

But Mexico is a country with significant opportunities and potential. Its macroeconomic stability is the cornerstone to foster investments and a growing private sector. Improvements in productivity growth, stronger institutions, and quality of service delivery and infrastructure, coupled with attention to reducing regional and household income inequalities, would bring shared prosperity.

Its trade agreements, enviable geographic position, and growing domestic market, make Mexico a prime destination for investment"

Supplement

Recovery Forecasts for the Mexican Economy:

Credit Suisse: adjusted a cut for Mexico's growth estimate to -9.6, from a previous -4%. According to the bank's analysts, the current economic environment will result in a deficiency in the industrial sector, which would fall as much as 35% due to a collapse in construction and manufacturing production.

Moody's Analytics: There is a 20% chance that the Chinese economy will collapse following the spread of the virus. In this way, the real growth of the GDP of the Asian nation would be 1.7%. However, the estimate indicates that, for the third quarter of the year, the real growth will be zero, which would mean China's worst economic performance in 30 years. Due to this situation, the global economy would also suffer significant consequences with a Gross Domestic Product of 1.1% growth for the period, which would translate into the worst performance since the financial crisis. According to Moody's, Southeast Asia and other emerging economies, including Mexico, would be the most affected, since their currencies would be pressured.

Goldman Sachs: The enterprise adjusted its estimate for the Mexican economy, where it now predicts a contraction for the economy of 8.5%, compared to its previous expected contraction of 5.6%. By 2021, they expect GDP to rebound to a 4.2% level. "The efforts to mitigate the negative effects of the coronavirus have been poor despite having a good amount of fiscal space, the response has been inferior to the norm of its Latin American peers."

BBVA Research: "We anticipate a fall in GDP of Between 6.0% and 12.0% in 2020". Private consumption could fall by 7.1% due to social distancing measures and the negative impact on employment. A net loss of between 893k and 1.083 million formal jobs by the end of 2020 is expected, which would be a substantially higher job-loss figure than in 2009.
